

06/10

WAP. to convert a given valid parenthesized infix arithmetic expression to postfix expression. The expression consists of single character operands and the binary operators + (plus), minus, * multiply and / divide.

```
#include <stdio.h>
#include <ctype>
#define size 50
```

```
char stack[size];
int top = -1;
```

```
void push (char element)
```

```
{
    stack[++top] = element;
}
```

```
char pop() {
    return stack[top--];
}
```

```
int pr (char symbol) {
    if (symbol == 'A')
        return 3;
```

```
    else if (symbol == '*' || symbol == '/')
        return 2;
```

```
    else if (symbol == '+' || symbol == '-')
        return 1;
```

```
    else
        return 0;
```

```

int main() {
    char infix[50], postfix[50], ch, element;
    int i=0, k=0;
    printf("Enter the expression");
    scanf get_s("%s", infix); push('#');
    while (i=0; i < strlen(infix); i++) {
        (ch = infix[i++]) != '\0' {
            if (ch == '(') {
                push(ch);
            }
            else if (isalnum(unsigned char) ch) {
                postfix[k++] = ch;
            }
            else if (ch == ')') {
                while (stack[top] != '(') {
                    postfix[k++] = pop();
                    element = pop();
                    (void) element;
                }
                while (stack[top] != '(' && pr(stack[top])
                    >= pr(ch)) {
                    postfix[k++] = pop();
                }
                push(ch);
            }
            while (stack[top] != '#') {
                postfix[k++] = pop();
            }
            postfix[k] = '\0';
            printf("\n Postfix = %s\n", postfix);
            return 0;
        }
    }
}

```

output
Enter the In
Postfix = A

✓ 9/10

✓ 6/10

02120

output

Enter the Infix expression: $(A + (B * C - (D / E ^ F) * G) * H)$

Postfix = $ABC * DEF ^ / G * - H * +$
